Regional ID Structure

- **First letter:** "R" identifies the facility as part of the regional system.
- **Second letter:** Indicates the facility type ("C" = Corridor, "I" = Intersection).
- **Third letter:** Indicates the context ("U" = Urban, "R" = Rural).
- **Number:** Two-digit code (01–10) representing the facility's regional priority ranking within its category.

Urban and Rural Corridors

Corridors were scored based on the following criteria:

- HIN All Modes - 30
- HRN Roadway Model - 15
- HRN Context Model – 15
- HIN Peds - 5
- HIN Bikes – 5
- HIN Motorcycle – 5
- HRN VRU Roadway Model – 5
- HRN VRU Context Model – 5
- Underserved Community – 15
- Total Possible: 100

The score for an entire corridor is the average of all the segments that compose it.

Scoring Clarifications

The following clarifications are notes will be useful for practitioners who review and use these rankings:

- Because only a portion of Northern Warren County is part of MVRPC and Franklin was excluded, fewer segments were available for analysis. When showing county-specific results for Warren County, a smaller set of results is shown.
- As shown in the scoring criteria, crash history (HIN), crash risk (HRN), and areas of community impact are considered. If a segment or intersection is near or similar to other high crash areas, it may receive a high score even though few or no crashes occurred in facility being analyzed.
- Some intersections were combined when they shared traffic signal installations or were within each other's influence area.
- Corridors vary greatly in length. They were separated when the characteristics in the segments that compose them varied, especially in urban vs. rural context.

Urban Intersections

Urban intersections were scored based on the following criteria:

- On HIN – 20
- HRN Context Model – 10
- HRN Roadway Model – 10
- Underserved Community – 10
- Total Possible: 50

Rank intersections based on score, then by KA crashes, then by B crashes.

Rural Intersections

Rural intersections were scored based on the following criteria:

- On HIN – 20
- HRN Context Model – 10
- HRN Roadway Model – 10
- Underserved Community – 10
- Total Possible: 50

Rank intersections based on score, then by HRN Roadway Context Model, then by HIN, then by KA crashes, then by B crashes.
