

## Narrative description of the proposed FPA

The boundary of the Facility Planning Area (FPA) for the Village of Wayne Lakes is proposed to exactly match the corporate boundary of the village and will include all parcels within the village. In addition, the FPA is proposed to include three parcels that are contiguous to, but lie outside of, the village. These additional parcels are:

- 1220 Evergreen
- 3378 State Route 121
- 3739 Weavers-Ft. Jefferson

## Designated Management Agency

The Village of Wayne Lakes is proposed to be the Designated Management Agency for the Wayne Lakes Facility Planning Area. The village will have primary planning, construction, operation and maintenance responsibilities for a proposed new wastewater collection system for the village.

Collected wastewater will be conveyed to the Village of New Madison via a proposed new force main system. The force main system will be owned by the Village of Wayne Lakes, and operation and maintenance is proposed to be contracted out.

Waste treatment is proposed to be accomplished under an agreement with the Village of New Madison. Capacity and operational improvements needed to treat additional wastewater flows from Wayne Lakes will be implemented by the Village of New Madison.

These local decisions are reflected in proposed text updates to the Areawide Water Quality Management Plan, chapter 10 and Appendix A. The "AWQMP Proposed Updates" document presents the draft text and map updates for those sections.
